Project Description

- IMDb, short for Internet Movie Database, stands as a comprehensive website housing an extensive collection of movies, web-series, TV shows, and more. It serves as a platform where users rate their watched content on a scale of 1 to 10 stars, facilitating others in gauging the quality of a movie.
- The primary goal of this project is to uncover correlations between various attributes of movies and their corresponding IMDb ratings. By doing so, we aim to provide actionable insights for stakeholders to optimize future movie projects.
- Understanding the factors influencing IMDb ratings can guide stakeholders in making strategic decisions related to movie production, marketing, and distribution.
- By optimizing various aspects of movie projects based on data-driven insights, stakeholders can increase the likelihood of producing successful and well-received content.

Project Approach

- **Assessment:** Careful examination of dataset to outline tasks.
- **Data Cleansing:** Excel-based cleaning, removal of null values, and unnecessary columns.
- **Genre Identification:** Popular genres identified through analysis.
- **Movie Duration Analysis :** Calculated the Top Movies w.r.t Time and IMDb Ratings.
- **Language Analysis :** Sorted the Top 5 Language according to No of Movies.
- **Profit Calculation:** Computation of profit for each movie, sorting by profit.
- **Director Analysis:** Grouping data by director to determine top 10 with highest mean IMDb scores.

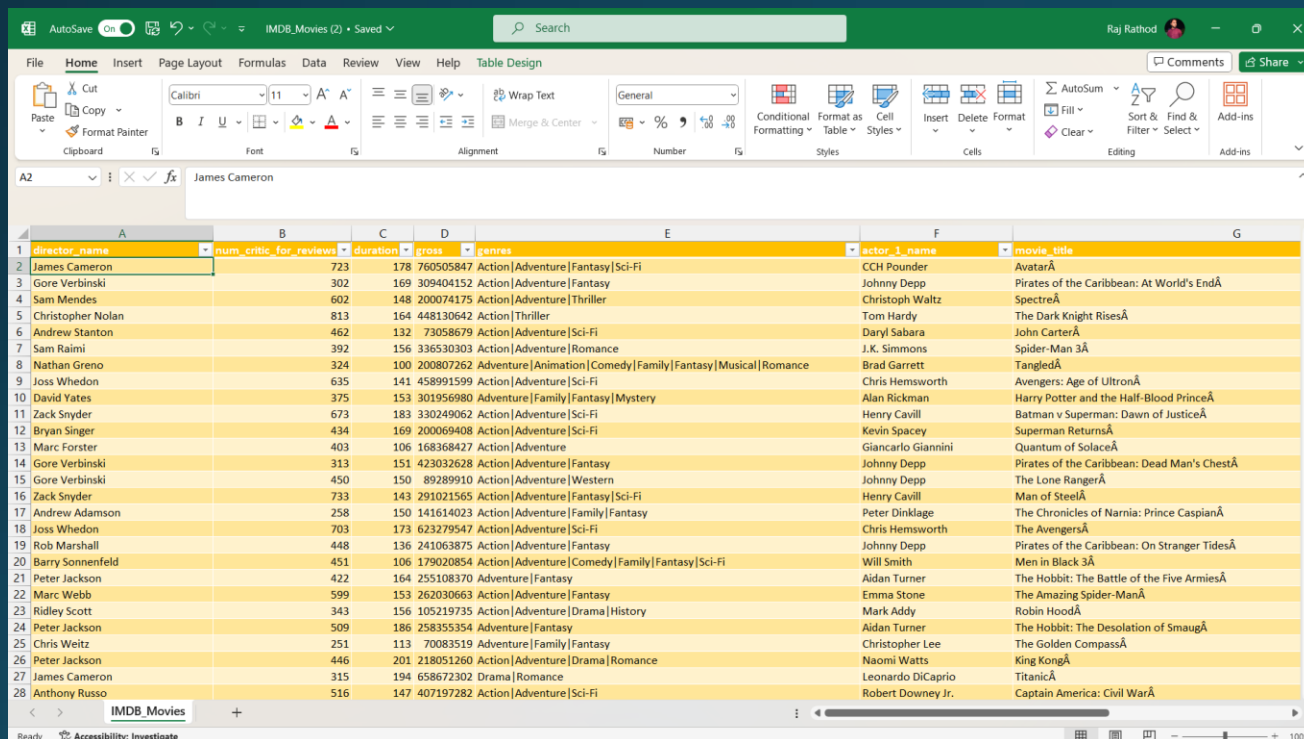

Tech-Stack Used

- **Microsoft Excel 2021:** Essential tool for data cleaning, analysis, and visualization.
- Sorting, filtering, and formula capabilities used for data cleansing and profit calculation.
- Functions employed for extracting top movies and grouping data.
- Charting features utilized for effective data visualization.
- User-friendly interface and diverse functionalities made it the ideal choice for the project.
